

Managing early season canola pests

To address the management of early season canola pests, a roadshow of workshops will be conducted across NSW to present the latest research and current information on early season pest management. The workshops are designed to assist advisors and farmers in identifying the range of pests and natural enemies they will encounter in canola growing areas around NSW, and help establish a network of support from researchers, experienced agronomists and entomologists when they need advice in future.

CESAR & FarmLink Workshop Roadshow 2019 —Managing early season canola pests

This workshop has been funded by GRDC and is supported by AOF, NSW DPI and Local Land Services.

Technical material is supplied by CESAR and will be presented by an experienced team of entomologists and agronomists from around NSW (Dr Melina Miles, Phil Bowden, Don McCaffery, Penny Heuston, Peter Watt, Lisa Castleman and Zorica Duric).

Workshop program will cover:

- Insect Identification
- Early season Pest discussion
- Management Options and
- Monitoring techniques
- Paddock walk risk assessment

Provided with workshop:

- Morning tea and lunch
- Best Management Practices Guide
